IL CONSIGLIO

Welcome to Villa Vigoni 2017

This year, the 25th edition of Glycosaminoglycan Symposium taking place in Villa Vigoni (Lovenno, Lake Como) has the difficult task to combine fortunate and unfortunate news: to celebrate a quarter of a century of the Glycosaminoglycan Symposia and to remember Professor Benito Casu who organised for over 20 times this symposium together with his German partner Professor Job Harenberg.

Eminent specialists from all over the world are invited to contribute to discussion of topics of actual or emerging interest in the field of chemistry, biochemistry, biology, pharmacology, and clinical applications of heparin and other glycosaminoglycans. Both basic and applied aspects will be covered and discussed, with about twenty percent of participants being associated with industrial companies. Participation in the symposium (only by invitation) is limited to a maximum of 80 participants.

The subjects selected for discussions include heparin synthesis, structural characterization and protein interactions, biological functions, clinical aspects including anti-inflammatory and anti-tumor activity. Moreover, being the 25th anniversary of the symposium and following the death of Benito Casu, an opening special session and some "Casu Lectures" dedicated to these occurrences have been scheduled.

All speakers will outline the state-of-the art in each field and present novel results and future perspectives. A sufficient time will be allotted to in-depth discussion. The informal, workshop-like character of the symposia and the pleasant surroundings of the villa traditionally stimulate also after-session interactions among participants.
